HOW TO COMPLETE THE RED-OBJ SHEET

BACK v0.7 EN

Follow steps 01 to 08. Every field, valid value and Bridge interpretation is defined below.

01 TURN HEADER

FIRST SHEET OF THE TURN
TURN: write 01-99.

FIRST IMPACT HHMMZ: write four digits in 24-hour Zulu time. This is the first impact of the complete RED attack.

LATER SHEETS

Leave both fields blank. The app retains the last validated turn, date and first-impact time. Filling only one header field stops validation.

02 CALIBRATION

Calibration is optional. Copy each printed character into its matching box: 0-9, then A-Z.

Fill all 36 boxes or leave all 36 blank. The app stores a complete row on this device. It ignores a partial row.

Use the same dark blue or black pen as the plan. Write one block-capital character per box without touching the borders.

03 TARGET CODE AND GRID

OBJ TARGET

Write three letters and two digits. The hyphen is already printed. The app compares the complete code with the catalogue.

ENG 01-31 Energy
IND 01-10 Industry
CMD 01-08 Command
GOV 01-18 Government
LOG 01-20 Logistics
CIV 01-25 Civil

FOD 01-14 Food
AIR 01-21 Air bases
CAS 01-16 Ammunition
TAD 01-06 Tac aviation
CPS 01-16 Cmd posts
CAD 01-10 Air defence

A1 GRID SQUARE

Write one letter A-J and one digit 1-7. The app blocks a target that does not belong to that grid.

Use one or two target blocks. Leave the complete second block blank when unused.

04 GEOMETRY: CHOOSE ONE VALUE FOR EACH ACTIVE WAVE

A DIRECT

Shortest stable route to this target.

B INDIRECT

Detour or different entry quadrant before the final leg.

C MULTI-AXIS CONVERGENCE

Separate corridors converge on the same target.

D DIVERGENCE

Use D on waves aimed at two or more targets. Bridge gives every D wave one common corridor to a shared divergence point, then branches to each target. No extra data is required.

E AIR-DEFENCE EXCITATION

Bridge skirts and slightly enters several engagement zones of the base medium-range AD deployment before turning to the final target. No extra data is required.

Geometry changes routed OWA and CR effectors. BL and HY retain their direct ballistic or hypersonic trajectories.

05 SYNCHRONIZATION: CHOOSE ONE

T1 TIME CONVERGENCE

Bridge times the effectors in this wave to converge on the stated first-impact time.

T2 SUSTAINED PRESSURE

Bridge staggers category arrivals and uses wider launch spacing to sustain pressure.

T3 SPLIT RE-ATTACK

Bridge splits each category 50/50 (odd remainder in group 1). Group 2 begins 30 minutes after group 1's final impact.

The printed T is fixed. Write only 1, 2 or 3 in the synchronization box.

06 EFFECTOR QUANTITIES

Write exactly three digits in every quantity box.

OWA attack drones
CRUISE cruise missiles
BALLISTIC ballistic missiles
HYPERSONIC hypersonic weapons

Valid range: 000-999. Use 000 when a category does not participate. An active wave needs at least one effector. T3 needs at least two.

07 FIRST-IMPACT OFFSET

OFFSET MIN uses three digits from 000 to 999. It is the number of minutes from the first impact of the turn to the first impact of this wave. It is independent of the preceding wave.

On the first sheet, TARGET 1 / W01 must use 000.

HANDWRITTEN EXAMPLE

04	0615	ENG-12	F4	
A	1	120	000	015

08 REPEAT, PHOTOGRAPH AND REVIEW

Complete W02 and W03 in the same order or leave each whole wave blank. Then complete TARGET 2 in the same way or leave the entire block blank.

Photograph in landscape orientation. Keep the sheet flat and show all four corner marks. Avoid shadows over the boxes.

The app reports uncertain characters, incomplete waves, invalid target codes and target/grid conflicts. Review every interpreted field before validating the sheet.
