HOW TO COMPLETE THE BLUE RESERVE SHEET

Set all three category decisions - protection priorities, engagement policy and effector allocation

1. PROTECTION PRIORITIES (P1-P3)

Meaning

Define which target categories are protected first by every base and reserve system in the selected system category: A = ABM, M = medium range or C = C-UAS.

How to write it

Use one three-letter objective-category code in each field, without a target number.

Priority order

Priority 1 is protected first, then Priority 2 and Priority 3.

Blank Protection priorities

Leave all three fields blank to retain the latest order for that system category. Unit objectives in reserve rows remain specific five-character target codes.

VALID OBJECTIVE CATEGORY CODES

AIR	Air Bases
CAD	Critical Air Defence Systems
CAS	Critical Ammunition Storage
CIV	Civil infrastructure
CMD	Military command
CPS	Command Posts
ENG	Energy infrastructure
FOD	Food infrastructure
GOV	Government institutions
IND	Heavy industry
LOG	Logistics
TAD	Tactical Aviation Deployments

HANDWRITTEN PROTECTION PRIORITY 1 EXAMPLE

2. ENGAGEMENT POLICY (F1-F3)

Meaning

Defines how many interceptors are committed to each incoming threat. The selected rule applies to every base and reserve system in the category.

F1 - Conservation

One interceptor per threat. No second engagement attempt.

F2 - Balanced

One initial interceptor; a second may engage if the first fails and time permits.

F3 - Enhanced protection

Two interceptors are assigned to the same threat.

Blank Engagement policy

The app and Bridge retain the latest Engagement policy for that category. Enter a new value only when the policy changes.

HANDWRITTEN ENGAGEMENT POLICY EXAMPLE

3. EFFECTOR ALLOCATION (E1-E3)

Meaning

Defines which compatible defensive system the Bridge should select for an engagement.

E1 - Best available

Use the compatible effector with the highest probability of success.

E2 - Sufficient capability

Use the least scarce compatible effector that is adequate for the threat.

E3 - Reserved capability

Reserve the category for its defined threat classes; the Bridge applies the category restrictions.

Blank Effector allocation

Retain the latest Effector allocation rule for that category. Enter a new value only when it changes.

Reserve rows

The base is retained. Use one row per released element: A allows 2, M allows 6 and C allows 5. Its objectives must belong to its selected grid.

Ammo and capture

Manual ammo is optional. Use dark block capitals. Photograph in landscape with all four marks; fill all 36 calibration boxes only to replace the writing profile.
