

RED-OBJ v0.6 EN

Coded capture form for Planning Bridge

ID AND VERSION

GRID SQUARE		TARGET				START TIME HHMMZ				TURN	
					-						

ONE SHEET PER TARGET

The app checks that the target belongs to the stated grid square.

GEOMETRY A Direct | B Indirect | C Multi-axis convergence | D Divergence* | E Air-defence excitation*

SYNCHRONIZATION

A Direct | B Indirect | C Multi-axis convergence | D Divergence
T1 Time convergence | T2 Sustained pressure | T3 Re-attack

FILLING Turn 01-99: one character per box; quantities 000-999 (000 if unused); REF S/P in the first box or Wnn in all three; EVENT always 2 letters (blank if REF=S).

RELATION 0 same time, + after, - before; OFFSET uses 3 digits; leave unused waves blank. * For D/E, complete the additional targets in the app.

Diagram illustrating the layout of the W01 data block, showing the arrangement of fields and their dimensions:

- GEOMETRY**: 1x1
- SYNCHRONIZATION**: 1x1 (Contains a 'T' in the center)
- OWA**: 1x3
- CRUISE**: 1x3
- BALLISTIC**: 1x3
- HYPERSONIC**: 1x3
- REFERENCE**: 1x3
- EVENT**: 1x2
- RELATION**: 1x1
- OFFSET MIN**: 1x3

Diagram illustrating the layout of the W02 data block, showing the arrangement of fields and their relative positions:

- GEOMETRY**: 1 field
- SYNCHRONIZATION**: 1 field (containing 'T')
- OWA**: 3 fields
- CRUISE**: 3 fields
- BALLISTIC**: 3 fields
- HYPERSONIC**: 3 fields
- REFERENCE**: 3 fields
- EVENT**: 2 fields
- RELATION**: 1 field
- OFFSET MIN**: 3 fields

W03

GEOMETRY	SYNCHRONIZATION	OWA	CRUISE	BALLISTIC	HYPERSONIC	REFERENCE	EVENT	RELATION	OFFSET MIN
[]	T []	[][][]	[][][]	[][][]	[][][]	[][][]	[][]	[]	[][][]

Diagram illustrating the layout of a 100-bit word, divided into 10 fields:

- GEOMETRY (16 bits)
- SYNCHRONIZATION (16 bits, split into 1 bit and 15 bits)
- OWA (16 bits)
- CRUISE (16 bits)
- BALLISTIC (16 bits)
- HYPERSONIC (16 bits)
- REFERENCE (16 bits)
- EVENT (16 bits)
- RELATION (16 bits)
- OFFSET MIN (16 bits)

Diagram illustrating the layout of the W05 data block, showing the arrangement of fields and their corresponding data structures:

- GEOMETRY**: 1 cell
- SYNCHRONIZATION**: 1 cell (containing 'T')
- OWA**: 3 cells
- CRUISE**: 3 cells
- BALLISTIC**: 3 cells
- HYPERSONIC**: 3 cells
- REFERENCE**: 3 cells
- EVENT**: 2 cells
- RELATION**: 1 cell
- OFFSET MIN**: 3 cells

W06

GEOMETRY	SYNCHRONIZATION	OWA	CRUISE	BALLISTIC	HYPERSONIC	REFERENCE	EVENT	RELATION	OFFSET MIN
	T	O	C	B	H	R	E	R	O

0	1	2	3	4	5	6	7	8	9	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z
---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---

CALIBRATION

FILL ALL 36 BOXES OR LEAVE EVERY BOX BLANK

HOW TO COMPLETE THE RED-OBJ SHEET

Field, code and mobile capture guide

[BACK v0.6 EN](#)

1. WRITING RULES

- Use a dark blue or black pen.
- Write in block capitals, with one character inside each box.
- Do not cross out or overwrite. If you make a mistake, use a new sheet.
- For a wave in use, enter 000 in every weapon category that does not participate.
- Leave every unused wave block completely blank.

2. CALIBRATION

- Fill all 36 boxes. Each is 7 x 8 mm, exactly like every writable box on the sheet. Do this only the first time or to replace the stored profile.
- Copy each printed character into its box. Leave every box blank if you do not want to change the profile.
- A partial calibration is ignored and does not replace the previous one.

3. HEADER

- N** **Turn**
Turn number using two digits, from 01 to 99.
- A1** **Grid square**
Operational grid code, from A1 to J7.
- OBJ** **Target**
RED catalogue code: three letters and two digits. Example: ENG-12.
- Z** **Start time**
Four digits in HHMMZ format using the 24-hour clock. Example: 0600.

4. TAKING THE PHOTO

- Place the sheet flat, with no folds or shadows over the boxes.
- Keep the phone parallel to the paper and include all four corner marks.
- Review the interpreted data on screen before validating the submission.

5. GEOMETRY

- A** **Direct**
A short, stable approach towards the target.
- B** **Indirect**
A detour or grid change before the final leg.
- C** **Multi-axis convergence**
Two or more separate corridors terminate over the same target.
- D** **Divergence**
A common route splits towards several targets. The app will request the additional destinations.
- E** **Air-defence excitation**
The route threatens other areas before the main effort. The app will request the apparent target.

6. SYNCHRONIZATION

- T1** **Time convergence**
Groups are coordinated to concentrate their arrival.
- T2** **Sustained pressure**
Launches are spaced to prolong the threat and defensive expenditure.
- T3** **Re-attack**
The wave returns to a target after an earlier action.

IMPORTANT

Geometry describes the route of the wave. Synchronization describes how it is distributed over time.

7. QUANTITIES

- OWA** **Attack drones**
Total number of one-way attack drones.
- CR** **Cruise**
Total number of cruise missiles.
- BA** **Ballistic**
Total number of ballistic missiles.
- HI** **Hypersonic**
Total number of hypersonic weapons.
- Use three digits, from 000 to 999. The Bridge will check the total against released stock.

8. TIME RELATION

- S** **Plan start**
Use the first box and leave the other two blank.
- P** **First wave**
Enter P in the first box and leave the other two blank. The Event field identifies the specific milestone.
- Wnn** **Another wave**
Enter W and two digits, for example W01.

EVENT: always enter both letters: LS first launch, LE last launch, FI first impact or LI last impact. There are no one-character Event codes. With REFERENCE S, leave both boxes blank.

RELATION: 0 same time, + after, - before. OFFSET: minutes using three digits.

9. EXAMPLES

S + 000

Starts with the beginning of the plan.

W01 FI + 015

15 minutes after the first impact of W01.

W02 LI - 010

10 minutes before the last impact of W02.
